(1959-1960) Inis Beag

511
829 come ashore in the future, for his use of the term poverty when describing Inis Beag life in a series of articles. The islanders, however, constantly complain of their indigence privately and deprecate it and are embarrassed by it in the presence of strangers. Girls and young women are particularly disparaging, and elders are puzzled by this attitude because the lot of youth is so much easier than was that of their mothers and grandmothers. Those persons who extol island existence usually do so in a defensive manner; after conceding that goods are in short supply, albeit "no one suffers from want of food or clothing," they go on to stress the healthy climate of the island, the freedom and independence that they enjoy, the sanctity of Inis Beag and its many saints of the past, and the strength of Catholic belief. Sometimes the advocate is followed by a denunciation of urban life, where these essential characteristics are lacking, or by a recounting of the difficulties being encountered by a relative just arrived in Boston or London.

233 The subsistence economy of Inis Beag always has been dominated by agricultural pursuits, contrary to frequent assertions by writers that farming was subsidiary to fishing two generations ago. Most householders own land on which they grow potatoes and other vegetables, grass, and sometimes sally rods, and where they pasture cattle, sheep, goats, horses, and asses. Potatoes are the staple crop, and after they are harvested the land usually is seeded with grass and used as pasturage for a number of years before being replanted. Indigenous soils bearing grass at the back of the island also serve as pasturage, and horses and asses at times are permitted to roam the trails and common land to forage whatever they can [262] from the meager flora there. Supplementing potatoes in the diet are various vegetables, milk from cows and nanny goats, meat from island sheep and poultry, [342] fish, and other foods, many of which are imported and sold in the shops. Rye is [343] grown for thatching houses and contiguous outbuildings, as well as barns located [493] south of the terrace crest, and sally rods are used to weave several types of containers. The only vehicles in Inis Beag are three two-wheeled carts employed to transport heavy loads, such as building stones, along the rough and narrow trails. Most householders own asses or horses, often ridden, which carry burdens in baskets
433 or pull carts. Other subsistence activities are knitting, weaving, crocheting, tailoring,
• 28 shoemaking, and net making, although the last skill almost has died out.

433 A slowly expanding cash economy features the export of cattle and sheep
[437] reared or fattened in the island and of surplus potatoes, the collection of seaweed for extraction of its iodine content at a mainland factory, the manufacture of [28] craft objects, and the keeping of tourists in private homes. Among the craft commodities produced are cable-knit sweaters, miniature *curach*, stockings knitted at the local factory in the coast guard station, and articles of clothing worn by the folk—woven belts, cowhide shoes, and shawls. These goods are sold both to visitors [657] and to middlemen who resell them in Ireland and export them abroad. The cash economy is buttressed considerably by government subsidies of many sorts and [651] by remittances from emigrant kin. Not only are income and property taxes not [429] collected in Inis Beag, but rents are extremely low, both of which conditions rep- [124] resent indirect government subsidization. Income information is as difficult to come by as data concerning pagan supernatural beliefs, disputes, and sexual atti-

Celts. But local legend, historical evidence, and genealogical data collected by my wife and me indicate that the present population is descended from immigrants who came to the island from many parts of Ireland following the Cromwellian incursion of the seventeenth century. The islanders still express bitterness over conditions of poverty and servitude experienced by their ancestors during the 300 years that they lived under absentee Anglo-Irish landlords. All of the excesses of foreign domination suffered by mainland peasants were suffered by the inhabitants of Inis Beag, but were aggravated by the ordinary hardships of island living. Little was known about events in Inis Beag during the eighteenth and early nineteenth centuries until the island was visited by archeologists and publicized in their scientific writings. The surrounding area of the mainland was very much isolated and seldom visited at that time, although trading between Inis Beag and nearby communities was carried on, and passing ships sometimes called at the island.

Agricultural pursuits have always dominated the subsistence economy of Inis Beag. Most householders own land on which they grow potatoes and other vegetables, grass, and sometimes rye and sally rods and where they pasture cattle, sheep, goats, asses, and horses. The back of the island, behind the communities, is divided into four strips, and each landowner possesses numerous plots located along the "quarter" on which his village fronts. The average combined holding is sixteen acres, and almost 50 percent of the land is composed of arable indigenous and manufactured soils. Potatoes are the staple crop, and they are supplemented by various other vegetables, milk from cattle and goats, meat from island sheep, fish, eggs, and other foods, many of which are imported and sold in the shops. Rye is grown for thatching, and sally rods are used to weave several types of containers. Other subsistence activities (which also provide income for some folk) are knitting, weaving, crocheting, tailoring, and sandal making.

A slowly expanding cash economy features the export of cattle and sheep fattened on the island and of surplus potatoes and fish, the collection of seaweed for extraction of iodine at a mainland factory, the keeping of tourists in private homes, and the manufacturing of craft objects for sale to visitors and for export. At the turn of the century, fishing from canoes—with nets and lines often many miles out in the ocean—was an important subsistence and income activity. A few islanders who owned little or no land lived primarily by fishing and kelp-making. But over the past few decades, fish have become less plentiful and the weather more inclement, especially during winter
